

SBR Sewage Treatment Plant

5:5 Discharge Quality

Today SBR sewage systems with submerged aerators are the most used fully biological sewage technologies throughout Europe. As a pre-assembled complete system of REWATEC, the MONOfluido sewage tanks are very easy to install. They are extremely compact, have a low installation depth and an easy to use technology.

Your advantages:

- Meets 5:5 Standard
- No blockage dangers, simple access for maintenance
- Easily adaptable for number of inhabitants
- High Quality, according to European Standards and safety standards, certified pumps and control technology
- 25 years tank warranty
- Easy install – no concrete required
- Very low running costs
- Consistent quality of output
- Low maintenance costs
- Landscape friendly

How it works:

To meet a 5:5 standard (5mg/l BOD5 and 5mg/l SS) all SBR plants by REWATEC are combined with KLAR BOX systems for a mechanical as well as biological post-treatment of the discharge, either for infiltration into the underground or discharge into a river. The KLAR-BOXes can be adapted to all SBR systems by REWATEC.
